REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art detailed in form PTO-892 of interest discloses a related monomer as set forth in the instant claims but assigns the (me)acrylate group to a specific site wherein in the instant application the (me)acrylate group is bound to one of seven carbon atoms. The prior art has attached to the same carbon atom as the (me)acrylate group or the carbon atom adjacent to the (me)acrylate group a C1 to C4 alkyl group (other than a t-butyl group). Assuming the site of the (me)acrylate group is the same as in the prior art the instant claims must have **both** the carbon atom attached to the (me)acrylate group **and** the carbon atom adjacent to the (me)acrylate group have hydrogen atoms attached to these sites.

Shown below is formula I taken from claim 1 of the prior art. R1 and R2 in the instant claims must both be hydrogen atoms, however, in the prior art, at least one of R1 or R2 is a C1 to C4 alkyl group (other than a t-butyl group),

wherein one of R¹ and R² represents an alkyl group, which has 1 to 4 carbon atoms and is other than a tert-butyl group, and the other represents a hydrogen atom or an alkyl group which has 1 to 4 carbon atoms and is other than a tert-butyl group; R³ to R⁹ each independently represent a hydrogen atom, a silyl group, a cyano group, a hydroxyl group, a halogen atom or a monovalent nonpolymerizable organic substituent group; and A represents a polymerizable group having a carbon-carbon double bond.

With respect to claims 15 and 17 of the instant application : The prior art detailed in form PTO-892 discloses a (me)acrylate monomer having a hydrocarbon group with 8 carbon atoms having an alicyclic lactone structure, Miwa et al., Okino et al., Kodama, Sato et al., Iwai et al. (11/27/01), Kinsho et al. (6/13/02), 3 Chen et al. patents all with (5/28/02), Uetani et al. (4/3/01), Watanabe (3/27/02), Nishi et al. (8/29/02), Takata et al. (3/26/02) and Hatakeyama et al. (2/15/01), all cited on applicant's IDS of

Art Unit: 1752

3/6/06, read on claims 15 and 17 in that the lactones in the patents have 7-16 carbon atoms. The filing dates are in parentheses. The filing date of the prior art on PTO-892 is 8/16/00.

On 2/27/02 applicant submitted a certified translation of priority document JP 10-188853 having a date of 7/3/98 that overcomes any rejection over the prior art and the art listed above on applicant's IDS.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
